

Design Thinking Principles
Assignments

Artifact 1: User Research & Customer Journey Mapping

Problem Space

What is success to the customer ? What is the problem ?

Target Audience Description:

A focused description of the users for whom the application is intended. Define 3–5 personas and describe their main characteristics. Empathy map for 2 personas.

Survey Objectives (briefly):

What is important to learn from users, current challenges, expectations from the proposed solution

Data Collection Method:

Briefly describe the research methods used—such as a short questionnaire, interviews, or observations.

Key Findings:

Present 3–5 central insights from the survey. For example:

- Which interface features are important to users?
- What challenges do they currently face?
- How open are they to new technologies?
- What value can the proposed solution provide for them?

Overall Document:

The document should be concise and to the point—presenting only a summary of the collected data and the most important insights for further interface design.

Artifact 2 - interactive Prototype and User Testing

Present the decisions you made

- **Application goal** and a brief description of the application
- **Requirements for MVP** : Scenarios Descriptions Which prototypes should be implemented as MVPs?
- **Initial Design Deliverable** - A preliminary design output created using the design tool of your choice, Using tools such as Figma, miro No-Code platforms, or Vibe Coding.
- What critical functions and experiences can be built and teste ?
- Evidence of research, thinking, creativity, and execution

The Design Thinking Canvas
